## Smart Service Management & Integration Control Platform for Banks

Banks today rely heavily on multiple integration services, APIs, middleware connectors, and adapters to ensure smooth operations across digital channels, core banking systems, and third-party services. Managing these integrations manually often results in limited visibility, deployment errors, poor governance, and increased operational workload.

**Finonyx QuantumBus** is a centralized, intelligent service management platform that simplifies, monitors, and automates integration operations. Built with modern architecture and integrated with WSO2 Micro Integrator, it enables banks to monitor, deploy, control, and govern all integration services from a single dashboard, securely and efficiently.

### Why QuantumBus?

- Real-time visibility of service health and integration performance
- Reduces DevOps dependency for deployment and monitoring
